Guest Editor

Special Issue "Advances in Machine Learning"

Subject: Submission of Manuscript title “**Multi-path Deep CNN with Residual Inception Network for Single Image Super-Resolution**”

Dear Prof. Dr. Jihoon

We wish to submit a new and original research article entitled “**Multi-path Deep CNN with Residual Inception Network for Single Image Super-Resolution**” for consideration by the special issue of “**Advances in Machine Learning**” journal. We confirm that this work is original and has not been published elsewhere, and nor it is currently under consideration for publication to another journal.

In this work, we use the deep learning-based approach with Inception block strategy to enhance the low quality or low-resolution image to restore the high quality or high-resolution image. This work is significantly very important in the areas of image, video processing and computer vision tasks. Image super-resolution is still classical challenging problems to restore the high-resolution image, because earlier approaches mostly apply the conventional techniques or hand designed feature-based technique to enhance the quality of low-resolution image. Our approach is totally used the idea of deep learning approach to recover the super-resolution image. Thank you for your consideration, and we look forward to hearing from you at your earliest convenience.

Sincerely,

Dr. Wazir Muhammad, Ph.D.
